Categories of variables	Cognitive Function
Output variables	sc8n, r8n, pi8n, nv11n, r11n, r15n, nv15n, voc8n, v11n, a11n, voc11n, m15n, v15n, ga15n, r26n, ga11n, cog8h, cog11h, cog15h, SC8R, r8r, pi8r, nv11r, r11r, r15r, wv26r, nv15r, voc8r, v11r, a11r, voc11r, m15r, v15r, ga15r, r26r, ga11r

Summary

Cognitive function was first tested at age 8 years in a school setting, and again in this setting at ages 11 and 15 years. A test of verbal comprehension given at the latter age was then re-administered at age 26 years (with 10 additional items of increased difficulty to avoid a ceiling effect), as part of the first interview of the survey member as an adult.

Age 8 years

voc8n – as above for vocabulary but normalised to a mean of 100 and an sd of 15 **sc8n -** as above for sentence completion but normalised to a mean of 100 and an sd of 15 **r8n -** as above for mechanical reading but normalised to a mean of 100 and an sd of 15 **pi8n** - as above for picture intelligence but normalised to a mean of 100 and an sd of 15 For all 'N' variables 999 indicates missing data

Derived summary variable

cog8h – RH's standardised cognitive score at age8 - standardised for whole population available on each test see note below.

Formula cog8h=(voc8h+sc8h+r8h+pi8h)/4

Where **voc8h**, **sc8h**, **r8h**, **pi8h** are the standardised to the whole population available on each test versions of the variables **voc8r**, **sc8r,** r8r, **pi8r**.

Age 11 years

ga11n – as above for the verbal and non-verbal ability test but normalised to a mean of 100 and an sd of 15 **v11n -** as above for the verbal ability test items but normalised to a mean of 100 and an sd of 15 **nv11n -** as above for the non-verbal ability test items but normalised to a mean of 100 and an sd of 15 **voc11n** - as above for the vocabulary items but normalised to a mean of 100 and an sd of 15 **r11n** - as above for the mechanical reading items but normalised to a mean of 100 and an sd of 15 **a11n** - as above for the arithmetic items but normalised to a mean of 100 and an sd of 15 For all 'N' variables 999 indicates missing data

Derived summary variable

cog11h – rh's standardised cognitive score at age11 - standardised for whole population available on each test see note below.

Formula

cog11h=(r11h+voc11h+ga11h+a11h)/4

where **r11h**, **voc11h**, **ga11h**, **a11h** are the standardised to the whole population available on each test versions of the variables **r11r**, **voc11r**, **ga11r**, **a11r**

Age 15 years

Raw variables (N.B. all these are included in the ‘cogchad’ save file) **ga15n** – as above for the heim ah4 group ability test but normalised to a mean of 100 and an sd of 15 **v15n -** as above for the verbal items of the ah4 but normalised to a mean of 100 and an sd of 15 **nv15n -** as above for the non-verbal items of the ah4 but normalised to a mean of 100 and an sd of 15 **r15n** - as above for the watts vernon but normalised to a mean of 100 and an sd of 15 **m15n** – as above for mathematics but normalised to a mean of 100 and an sd of 15 For all ‘N’ variables 999 indicates missing data

Derived summary variable

cog15h – rh’s standardised cognitive score at age15 - standardised for whole population available on each test see note below.

Formula cog15h=(r15h+ga15h+m15h)/3

Where **r15h**, **ga15h**, **m15h** are the standardised to the whole population available on each test versions of the variables **r15r**, **ga15r**, **m15r**.

Age 26 years

r26n – as above but normalised to a mean of 100 and an sd of 15 (missing = 999) **wv26h** – Standardised version of the watts vernon reading test at age26 - standardised for whole population available on the test **r26h – S**tandardised version of the watts vernon reading test at age26, with an additional 10 items of increased difficulty to avoid a ceiling effect

Variables in this document

36 high-confidence matches

Variable	Label	How it was found
Clinical data [51] › Cognitive function [101] › Adulthood cognition [1012] › Reading comprehension (Watts-Vernon) [10121]		
r26n	Watts Vernon Reading Test used at age 15 (normalised score) - at age 26 years	topsheet field
r26r	Watts Vernon Reading Test used at age 15 (edited raw score) - at age 26 years	topsheet field
wv26r	Watts Vernon Reading Test (first 35 items) used at age 15 (edited raw score) - at age 26 years	topsheet field
Clinical data [51] › Cognitive function [101] › Childhood cognition [1011]		
a11n	Arithmetic test (50-items - normalised score) - at age 11 years	topsheet field
a11r	Arithmetic test (50-items - edited raw score) - at age 11 years	topsheet field
cog11h	Cognitive function score (standardised to whole population on each test) - at age 11 years	topsheet field
cog15h	Cognitive function score (standardised to whole population on each test) - at age 15 years	topsheet field
cog8h	Cognitive function score (standardised to whole population on each test) - at age 8 years	topsheet field
ga11n	Verbal and non-verbal ability - General Ability (80-items - normalised score) - at age 11 years	topsheet field
ga11r	Verbal and non-verbal ability - General Ability (80-items - edited raw score) - at age 11 years	topsheet field
ga15n	Heim A4 Group ability verbal and non-verbal test (130-items - normalised score) - at age 15 years	topsheet field

Variable	Label	How it was found
ga15r	Heim A4 Group ability verbal and non-verbal test (130-items - edited raw score) - at age 15 years	topsheet field
m15n	Mathematics test (47-items - normalised score) - at age 15 years	topsheet field
m15r	Mathematics test (47-items - edited raw score) - at age 15 years	topsheet field
nv11n	Non-verbal intelligence test (40-items normalised score) - at age 11 years	topsheet field
nv11r	Non-verbal intelligence test (40-items edited raw score) - at age 11 years	topsheet field
nv15n	Heim A4 Group ability non-verbal test (65-items - normalised score) - at age 15 years	topsheet field
nv15r	Heim A4 Group ability non-verbal test (65-items - edited raw score) - at age 15 years	topsheet field
pi8n	Non-verbal ability - picture intelligence (60-items - normalised score) - at age 8 years	topsheet field
pi8r	Non-verbal ability - picture intelligence (60-items - edited raw score) - at age 8 years	topsheet field
r11n	Mechanical reading - pronunciation - (normalised score) - at age 11 years	topsheet field
r11r	Mechanical reading - pronunciation - (edited raw score) - at age 11 years	topsheet field
r15n	Watts Vernon Reading Test (35-items verbal comprehension normalised score) - at age 15 years	topsheet field
r15r	Watts Vernon Reading Test (35-items verbal comprehension edited raw score) - at age 15 years	topsheet field
r8n	Mechanical reading - pronunciation - (normalised score) - at age 8 years	topsheet field
r8r	Mechanical reading - pronunciation - (edited raw score) - at age 8 years	topsheet field
sc8n	Verbal comprehension - sentence completion (35-items normalised score) - at age 8 years	topsheet field
sc8r	Verbal comprehension - sentence completion (35-items edited raw score) - at age 8 years	topsheet field
v11n	Verbal Intelligence (40-items - normalised score) - at age 11 years	topsheet field
v11r	Verbal Intelligence (40-items - edited raw score) - at age 11 years	topsheet field
v15n	Heim A4 Group ability verbal test (65-items - normalised score) - at age 15 years	topsheet field
v15r	Heim A4 Group ability verbal test (65-items - edited raw score) - at age 15 years	topsheet field
voc11n	Vocabulary test (50-items normalised score) - at age 11 years	topsheet field
voc11r	Vocabulary test (50-items edited raw score) - at age 11 years	topsheet field
voc8n	Vocabulary test (50-items normalised score) - at age 8 years	topsheet field
voc8r	Vocabulary test (50-items edited raw score) - at age 8 years	topsheet field
